Design Rationale /Statement of Intent

Introduction

This design rationale is to be read as part of a rezoning and development application for a 6 storey apartment building with 2 levels of underground parking at the corner of 200 Street and 53 Avenue.

For detailed information refer to the architectural, landscape, civil drawings, renderings and other related documents.

Site Characteristics and Context

The site is almost flat and is presently occupied with 5 single family houses. one lots is facing 200 Street, 3 lots are facing 53 Avenue and one lot is facing 53A Avenue. The total area of the site is 2932.3 square meter or 31,564 square feet.

There is 2.6-meter dedication along 200 Street and 2.1-meter dedication along 53 Avenue. There is also 5.0-meter corner cut at the intersection of 200 Street and 53 Avenue.

There is a 3-meter existing storm right of way "ROW" along the north property line.

The proposed development seeks rezoning from RS1 to CD, based on RM3.

The setbacks, floor area ratio, height, site coverage, number of parking, bicycle storage, garbage recycling, electrical car park and adaptable unit ratios are all in accordance with the provisions of the zoning by law and the OCP.

Proposed development contains 84 units introducing different types of suites, ranging from one to three bedrooms. Type and mix of the units provide a variety of accommodations which cater to different categories of home owners.

The unit mixes and the approximate areas of each type range from:

- 1 studio unit with a floor area of 363 sq.ft.
- 8 one bedrooms with an average area of 500 sq.ft.
- 36 one bedrooms plus flex with an average area of 580 sq.ft.
- 34 two bedrooms with an average area of 760 sq.ft.
- 5 three bedrooms with an average area of 1,030 sq.ft.

Indoor and outdoor amenities are provided at the ground floor.

The main entry to the lobby is provided from 53 Avenue and entry to the parking is provided from 53A Avenue.

Orientation, Massing, Building Form and Character

Massing orientation responds to the site setting and faces three streets. The proposed massing has frontages on every street resulting in the creation of a L shape building. The main lobby is located at the centre of the building on 53 Avenue. This entry is identifiable with a high arch expressing a stronger architectural identity and articulation.

The building is raised by approximately 4'6" from the street creating a podium with large private decks and planters for the residence. Stairs are provided from the street to the large raised decks offering a vibrant and lively presence at the street and the public realm.

A second planter is introduced 2'.0 above grade to break the height of the parking structure and provide space for additional landscaping. By setting the parking structure back from the property lines and introducing enhanced landscaping at the perimeter of the building, as well as in the central courtyard, provides visual stimuli, creating a multitude of points of interest which enrich the experience of the observer.

A variety of architectural forms and material are incorporated into the design including corner windows, bay windows and high ceilings create increased transparency and improved quality of living.

The façade is organized with emphasizing a horizontal base and vertical articulations. This is reinforced by projecting bay windows from first to fifth floor. The 6th floor is recessed considerably softening the edge of the building at the top. This concept also creates generous terraces for the larger suites on the 6th floor.

Entry to the U/G parking is from 53A Avenue through a ramp along the east property line. Loading bay is at the rear of the building next to the ramp. The loading bay has direct access to the lobby and the elevator.

Indoor and outdoor amenities are provided at the rear courtyard next to each other. Indoor amenity includes a gym, multi purpose room, kitchen and accessible washroom.

Livability / Energy Saving Measures

Where possible, operable windows are located on opposite walls to draw ventilation across the occupied spaces. Overhangs are provided at the roof level and at intermediate locations as shading devices.

Glazing is provided in all doors and walls of the elevator vestibules, bicycle storage rooms and lockers.

Most of the units are located in a manner that takes advantage of solar orientation and maximizes daylight in the suites. Oversized windows offer plenty of natural daylight.

The balconies and ground floor patios encourage the outdoor presence of the people that provides "eyes on street" and security for the private and public spaces..

The use of a high performance building envelope, energy efficient mechanical systems will exceed the new energy code and comply with ASHRAE 90, 2010.

All units have bike storage. 10 EV stations and 6 accessible parking stalls are provided.

Sustainability and Green Measures.

Many green building strategies have been incorporated into the project design. Summary of the measures include:

The site is located within the urban fabric of the City, close to public transportation and amenities. This location is designate as shoulder area in the new OCP.

Proposed development offers diverse unit types and sizes for small and large families..

All units have large private patios at grade or deck / balconies on the upper floors that contribute to the livability of the units and create a family-oriented environment.

Water efficient fixtures, energy efficient appliances and drought tolerant plants will be used to minimize the use of potable water.

Selection of materials is focused on durability and sustainability with the use of building materials that have high amounts of recycled content and are from local sources. Low emission adhesive paint and flooring will also be used throughout the units.

Green roof reduces the solar intensity and provides increased insulation. It also reduces the rate of storm run off from the site.

Common areas including the underground parking use energy efficient lighting with motion activated control systems that shut down lights when no one is present.

Enhanced landscaping is provided along the parking structure and the rear courtyard.

A-1.14

The rationale behind the CPTED strategy follows the principle standard measures for a typical residential development over UG parking. These provisions are aimed to enhance safety and strengthen the perception of security.

- Create Identifiable secured entries to the lobby, visitor parking courtyard and underground parking.

- All units at grade are raised above the street and have identifiable private patios. This feature, along with the presence of the balconies on the upper floors, creates a clear definition of hierarchy of space, a sense of territorial identity.
- The space in front and rear of the building is controlled by residents as well as cameras. The windows and the balconies along the streets ensure the presence of observers, which provide “**eyes on the street**” and security for the private and public spaces. Cameras will be installed at the main entry, and lobby, elevator cabs, and waiting areas, emergency exit stairs and parking entry gates.
- Provision for adequate lighting at the central courtyard as well as patio lighting.
- Landscaping, plants, and fences are designed in a manner that they are easily maintained and controlled to prevent graffiti and damages. The Strata Corporation should implement a maintenance manual.
- The simplicity of the massing and its orientation offers an open space environment visible from every angle with no enclave or semi enclosed spaces for strangers and wandering people.

Material and Colour

The selection of exterior finishes incorporates enhanced durability / longevity of construction materials and envisions a sustainable approach.

A variety of building material is used with emphasis on light sandy brick on the main facades, light and dark grey hardie panels and hardie siding. Colours and materials have been organized in manner to create harmony and connectivity throughout the building

Widows and railings are black colour and spandrel at corner windows are the same colour as window frames.
